

PROFESSIONAL SUMMARY

Management Information Systems graduate with practical experience at the intersection of business processes and technology. During my SAP IT internship, I gained hands-on experience with enterprise processes in procurement, inventory, and ERP operations, working closely with SAP teams and understanding how business requirements are reflected in system processes and data. I also have software development experience, including the development of an end-to-end e-commerce application and AI-powered applications. My academic background includes data analysis, SQL, machine learning, and natural language processing, supported by an undergraduate thesis focused on Turkish sentiment analysis of e-commerce reviews. I am interested in roles where I can combine business process understanding with technology, particularly in SAP/ERP, SAP technical development, data and BI, software development, and AI-related projects.

EDUCATION

Pamukkale University | Denizli, Turkey

Sep 2022 – Jun 2026

B.Sc. in Management Information Systems | GPA: 3.10/4.00

Undergraduate Thesis: Sentiment Analysis on Turkish E-Commerce Reviews using NLP and Machine Learning

RELEVANT EXPERIENCE

Ecogreen Enerji Holding | Denizli, Turkey

Jun 2026 – Aug 2026

SAP IT Intern

- Gained practical understanding of the energy sector’s operational processes and how business operations are supported through integrated SAP processes across a multi-site enterprise.
- Learned the SAP MM (Materials Management) processes covering material procurement, purchasing, goods receipt, inventory management, and material movements.
- Learned the SAP PP (Production Planning) processes covering production planning, material requirements, production orders, and the coordination of materials with production activities.
- Learned the SAP PM (Plant Maintenance) processes covering maintenance planning, maintenance notifications, work orders, equipment management, and maintenance activities.
- Learned the SAP QM (Quality Management) processes covering quality inspections, quality control, inspection results, and quality-related material processes.
- Observed how MM, PP, PM, and QM modules interact with each other, and developed an understanding of how material, production, maintenance, and quality data flow across business processes.
- Developed practical awareness of SAP DEV, QAS, and PRD environments, testing practices, controlled changes, data accuracy, and enterprise data governance.

Datakod Yazılım A.Ş. | İzmir, Turkey

Jun 2025 – Jul 2025

Full Stack Software Intern

- Designed, developed, documented, and tested an end-to-end e-commerce application using .NET 8, Blazor Server, Entity Framework Core, and SQL Server.
- Translated functional needs into application modules and relational database structures for product, order, stock, and user-management processes.
- Performed CRUD development, role-based authorization, data validation, debugging, and application testing using a structured Git workflow.
- Project: Petsas B2B E-Commerce

SELECTED PROJECTS

ZoonLogos – AI-Powered Subtitle Translation Extension

Aug 2026

github.com/selinpir/zoonlogos

Developed a Chrome extension for Prime Video that provides context-appropriate Turkish meanings, sentence translations, and short usage explanations for selected English subtitle words. Connected the extension to Groq language models through a Node.js and Express API while managing the API key on the server side. Implemented caching for repeated translations, API rate limiting, and fallback mechanisms for model errors.

Decathlon Product Review Sentiment Analysis – Undergraduate Thesis

Jun 2026

github.com/selinpir/decathlon-sentiment-analysis

Collected 12,497 customer reviews from 214 Decathlon products using Selenium and prepared a cleaned dataset of 12,463

Turkish reviews covering 16 sports categories and 18 brands. Labeled reviews as positive, neutral, and negative using XLM-RoBERTa and compared 9 machine learning algorithms with 10-fold stratified cross-validation. Achieved an AUC of 0.773 with Gradient Boosting and used SHAP to analyze the effects of review length, rating, brand, price, and usage duration on model predictions.

SAP Support Process Analysis and Improvement – Business Process Management 2025

GitHub Project

Analyzed an SAP support ticket process using As-Is / To-Be process modeling, SLA metrics, and Ishikawa root cause analysis, identifying bottlenecks related to assignment, prioritization, and escalation. Modeled process improvements targeting a reduction in SLA violation rate from 30% to 10%, average response time from 6 hours to 2 hours, and resolution time from 48 hours to 30 hours.

PetSas – Multi-Role E-Commerce Application | Internship Project Jun 2025 – Jul 2025

github.com/selinpir/petsas-ecommerce

Developed product, inventory, cart, and order operations for administrator, supplier, and customer roles using C#, .NET 8, Blazor, Entity Framework Core, and SQL Server. Implemented a pricing structure that stores historical price changes and minimum stock tracking. Worked on role-based access control and relational data management with Entity Framework Core.

PetSAS – Systems Analysis and Design 2025

GitHub Project

Contributed to requirements and process analysis for an information system designed for veterinarians and pet owners. Worked on Use Case diagrams, As-Is / To-Be process flows, DFDs, E-R diagrams, data dictionaries, database design, and user interface designs. Contributed to project planning across a 71-day schedule and 12 Scrum sprints and evaluated the system’s operational and financial feasibility.

Student Depression Risk Modeling with Logistic Regression – Data Mining 2025

GitHub Project

Prepared a dataset of 27,000+ observations and 18 initial variables using the CRISP-DM methodology, including missing value handling, outlier treatment, categorical encoding, and standardization. Built a Logistic Regression model with Python and scikit-learn, achieving 84.65% accuracy, 0.9185 ROC-AUC, and 0.89 recall for the target class. Used Odds Ratios to analyze the influence of key variables on model predictions.

Chess Tournament Database Design Apr 2025 – May 2025

github.com/selinpir/chess-tournament-database

Designed a relational SQL Server database covering tournaments, players, referees, categories, and match information. Modeled many-to-many relationships using junction tables and developed queries, views, functions, stored procedures, and triggers for structured data management.

CERTIFICATIONS

- Güçlü Kadınlarla Dijital Yarınlar – Big Data Eğitimi | Teknolojide Kadın Derneği | Jul 2026
- Logo Netsis Wings Entegre Eğitimi | Logo Yazılım / Logo Akademi | Jan 2026

TECHNICAL SKILLS

SAP & ERP: SAP MM; SAP PP; SAP PM; SAP QM; P2P processes; purchasing; inventory management; production processes; maintenance processes; quality management processes; SAP S/4HANA fundamentals; DEV/QAS/PRD environments; SAP development concepts; transport and change management fundamentals

Data & BI: SQL; Microsoft SQL Server; Excel; Python; Pandas; NumPy; Scikit-learn; NLTK; data preprocessing; machine learning; NLP; Power BI

Software Development: C#; .NET 8; ASP.NET; Blazor Server; JavaScript; Node.js; Entity Framework Core; Git

Web & Database Development: CRUD operations; relational database design; SQL queries; data validation; role-based authorization; API development; application testing; debugging

LANGUAGES & ADDITIONAL INFORMATION

Languages: Turkish – Native | English – B1 Intermediate (actively improving professional communication)

Strengths: Analytical problem solving, continuous learning, structured thinking, teamwork, stakeholder communication

Availability: Available full-time; open to relocation and domestic/international travel
